Summary

A Flutter developer with 2 years of experience collaborating with international remote teams worked on projects across telehealth, real estate, logistics, roadside assistance, and other domains.

Technical Skills

Languages: Dart **| Frameworks:** Flutter

Architecture & State Management: OOP, SOLID, Clean Architecture, MVVM, MVC, BLoC/Cubit, Provider, GetX,

Integrations: RESTful APIs, Firebase, Payment Gateways, Google Maps

Tools: Git, GitHub, CI/CD, Unit Testing, Debugging, Performance Optimization

Experience

Splenify , Pakistan (Full time - Remote) — July 2024 – July 2026
Developed and maintained Flutter applications, contributing to 6 production level apps in a remote team environment, supporting ongoing feature development, bug fixing, and performance improvements.

Farkito , France (Intern - Remote) — Feb 2024 – May 2024
Developed and launched Diyafa Customer and Diyafa Staff applications, implementing booking workflows and role based access control. Implemented features supporting services including laundry and cleaning.

Projects

24Doc Telehealth — 24hrdoc.com | Coming Soon
Built Pixel-perfect telehealth platform serving 12,000+ patients across 40+ medical conditions — built UI and integrated all backend services. Integrated dual payment gateways: Authorize.Net (encrypted card processing) and Stripe (recurring subscriptions). Built AI medical chatbot with streaming responses and speech-to-text. Architected 15+ BLoC modules across auth, checkout, chat, notifications, and subscriptions. Integrated 30+ REST API endpoints with JWT authentication and error handling.

SKRT— Demo
Dual-app roadside assistance platform (Requester + Responder). Implemented real-time responder tracking using Google Maps, traffic-aware ETAs, and automatic arrival detection. Documented server-side responder matching based on distance, availability, and service type, including timeout handling. Integrated Stripe payment workflows for payment holds, refunds, cancellation fees, and platform commissions. Authored a server-side architecture specification addressing 25+ security and business logic concerns involving payments, location tracking, and fraud prevention.

Makers Media— App Store
Developed role based access control (Creator/Marketer), secure authentication and session management, subscription based monetization (Free/Pro/Business plans), Google Maps integration for location and Geo-targeted features, push notification (Firebase Cloud Messaging) with scheduled alerts, real time analytical dashboards for engagement and revenue tracking

Education

Bachelor's degree in Computer and Information Technology, Tanta University.
